Dear Customer,

The Eltex cable rewinders of series 601KR ensure that the ground cable is safely reeled back after use, protecting it from damage and dirt.

The aluminum cable rewinder is made of impact-proof aluminum and is mounted with an assembly bracket. This allows the cable rewinder to be turned into the direction of the cable run making unwinding and rewinding easy. At type 601KR/AW the rubber cable outlet prevents moisture and dirt from penetrating the housing. The built-in cable stop mechanism allows the cable to be locked in place and released as required.

The plastic cable rewinder is encased in a robust and sturdy plastic housing. The cable outlet is fitted with four cable guide rollers for easy cable guidance.

The cable rewinders and the clamp holder are designed for wall mounting and may be used in zones with potentially explosive atmospheres.

Please read the operating instructions carefully before starting the instrument. This will help you prevent personal injuries and damage to property.

Please give us a call if you have any suggestions, proposals or ideas for improvements. We greatly appreciate the feedback from the users of our appliances.

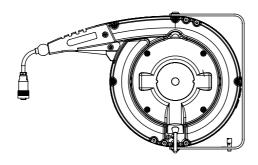

1. Overview

2. Safety

The units have been designed, built and tested using state-of-the-art engineering, and have left the factory in a technically and operationally safe condition. If used improperly, the units may nevertheless be hazardous to personnel and may cause injury or damage. Read the operating instructions carefully and observe the safety instructions.

For warranty conditions, please refer to the General Terms and Conditions (GTC), see www.eltex.de.

2.1 Identification of risks and hazards

Possible risks and hazards resulting from the use of the units are referred to in these operating instructions by the following symbols:

Warning!

This symbol appearing in the operating instructions refers to operations which, if carried out improperly, may result in serious personal injuries.

Caution!

This symbol appearing in the operating instructions refers to operations which, if carried out improperly, may result in damage to property.

Ex Warning!

Only for units with Ex approval.

This symbol denotes the special conditions which must be observed when operating the units in explosion hazard areas as specified in the approvals.

2.2 Technical advance

The manufacturer reserves the right to make changes to the technical specifications without prior notice in order to adapt the units to state-of-the-art engineering. Eltex will provide the latest information on any changes or modifications in the operating instructions on request.

2.3 Proper use

Active grounding

The cable rewinder series 601KR must be used only for static grounding and must be connected to the appropriate Eltex ground monitoring systems.

The application area are for example: refilling and filling stations, agitators or dryers for liquid or powdery substances, and in conveyor and transportation equipment with potentially explosive atmosphere.

The cable rewinders series 601KR are not suitable for use in a saline environment (e.g. sea ports).

The manufacturers will not assume any liability and warranty if the units are used improperly or used outside the intended purpose.

Modifications or changes made to the devices are not permitted.

Use only original Eltex spare parts and equipment.

2.4 Work and operational safety

Warning!

Carefully observe the following notes and the complete <u>chapter 2 "Safety", page 8!</u>

- The local standards, rules and regulations relating to the installation and operation of electrical appliances in potentially explosive atmospheres must be observed.
- Appliances designed for use in potentially explosive atmospheres must not be modified. The technical specifications for ambient conditions and operation must be maintained and observed (see <u>chapter 6 "Technical</u> <u>specifications"</u>, page 21).
- Electrical systems in potentially explosive atmospheres must always be in perfect technical condition. Defects must be rectified immediately (see <u>chapter 4 "Operation"</u>, <u>page 20</u>).
- Any work involving the units must be carried out by qualified electricians (see chapter 3 "Installation and assembly", page 11, chapter 5 "Maintenance", page 20).
- The unit may only be used by qualified personnel trained for explosion hazard areas.
- Please note the type plate indicating the connection data (supply voltage) of the units (see <u>chapter 4 "Operation"</u>, <u>page 20</u>).
- A "Connect/Disconnect Approval" by the plant operator must be obtained before carrying out any installation, assembly, service, repair or maintenance work in potentially explosive atmospheres. Make sure that there is no potentially explosive atmosphere existing in the working

BA-en-4007-2503 601KR

area. Ensure adequate ventilation and/or screening (see <u>chapter 3</u> "Installation and assembly", page 11, chapter 5 "Maintenance", page 20).

- The equipotential bonding line to the housing of the cable rewinders
 must be connected permanently according to the universal rules of
 electrical engineering. The terminal cross-section must equal at least
 the cross-section of the power supply of the ground testing device (see
 chapter 3.3 "Electrical connection of the cable rewinder", page 16).
- The housing of the cable rewinders may not be opened; the internal, pre-tensioned spring represents a significant risk. Only the cap may be removed to configure the stop mechanism (see connection of the cable rewinder", page 16).
- Perform regular checks to ensure that the cable and the insulation show no tears or abrasion that could impair the cable's insulation or functioning (see <u>chapter 5 "Maintenance"</u>, page 20).

2.5 Special conditions according to the certificate of conformity Special conditions for safe use

The equipment is only to be connected to the measurement circuit of the following ground monitoring systems:

Terracompact II Typ TCO030 S/B, Terrabox TCB030/.., Terracap Type TCB040-V2, TERRALIGHT Type TERRA-L/.. or other ground monitoring systems with the following output date:

Voltage: $U_o \le 40 \text{ V DC}$ Current: $I_o \le 250 \text{ mA}$ Power: $P_o \le 650 \text{ mW}$

10 BA-en-4007-2503_601KR

3. Installation and assembly

When installing the systems in potentially explosive zones, every possible precaution must be taken to ensure that no explosive atmosphere exists!

3.1 Aluminum cable rewinder

The aluminum cable rewinder is attached to a wall, column or ceiling via the installation bracket as shown in Fig. 2. Roofing must be provided when installing the unit outside. Select a suitable installation height to make sure that the ground clamp is within easy reach and does not make contact with the floor. The cable rewinder type 601KR/AW may be turned by 320° and types 601KR/DW and 601KR/EW by 170° around its installation axis.

The cable rewinder is suitable for hazardous location area.

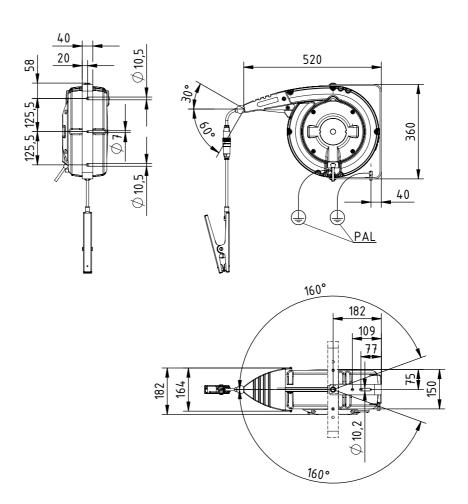

Fig. 2: Assembly of the aluminum cable rewinder 601KR/AW

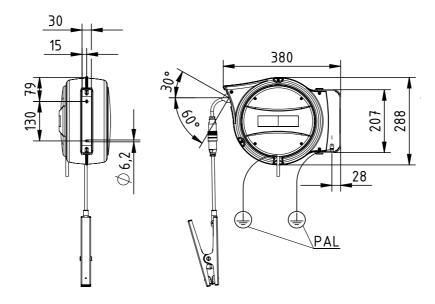

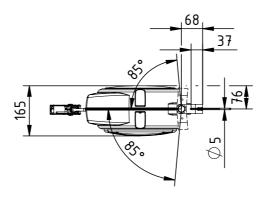

Fig. 3: Assembly of the aluminum cable rewinder 601KR/DW 601KR/EW

Stop mechanism, aluminum cable rewinder 601KR/AW

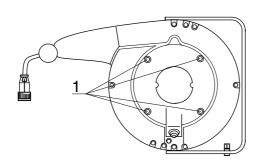

Enabling the stop mechanism:

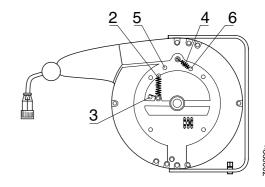

- Remove the four bolts (1) and take off the side cover (see Fig. 4).
- Take the spring (4) off bolt (5) and hook into bolt (6).
- Remove the screw (2) to make sure that the locking mechanism (3) is free.
- · Replace the side cover.

Disabling the stop mechanism:

- Remove the four bolts (1) and take off the side cover (see Fig. 7).
- Take the spring (4) off bolt (6) and hook into bolt (5).
- Turn the locking mechanism (3) by 120° in clockwise direction and turn in the screw (2) fully to make sure that the locking mechanism is disabled.
- · Replace the side cover.

electrostatic innovations

Type 601KR/DW and Type 601KR/EW

Enabling / Disabling the stop mechanism

- Remove the four bolts (1) and take off the side cover (see Fig. 5).
- Take the spring and hook into according position 2 resp. 3.
- · Replace the side cover.

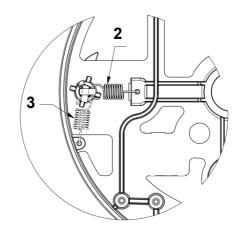

Fig. 5: Locking mechanism of the aluminum cable rewinder for type 601KR/DW and 601KR/EW

2 = enabled stop mechanism 3 = disabled stop mechanism

3.2 Plastic cable rewinder

The cable rewinder made of weather-resistant plastic is designed for wall mounting. It can be installed in the explosion hazard zone.

The cable rewinder is attached to a wall, column or ceiling via the installation bracket as shown in Fig. 6. Roofing must be provided when installing the unit outside. Select a suitable installation height to make sure that the ground clamp is within easy reach and does not make contact with the floor.

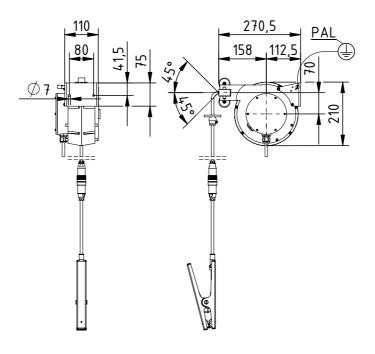

Fig. 6: Assembly of the plastic cable rewinder type 601KR/KW

7-114868v 3

3.3 Electrical connection of the cable rewinder

- The equipotential bonding line to the housing of the cable rewinders
 must be connected permanently according to the universal rules of
 electrical engineering. The terminal cross-section must equal at least
 the cross-section of the power supply of the ground testing device.
- The housing may not be opened; the internal, pre-tensioned spring represents a significant risk. Only the cap may be removed to configure the stop mechanism.

Active grounding

The cable rewinder in connection with the active ground clamps is connected to the Eltex ground monitoring system via the terminal box of the cable rewinder. The cable rewinder must be permanently connected to an equipotential bonding lead.

The ground clamps are connected via the existing coupling plug.

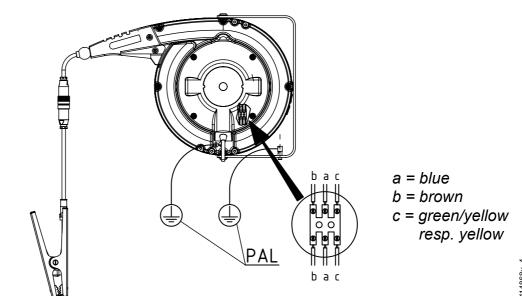

Fig. 7: Connecting the aluminum cable rewinder 601KR/AW

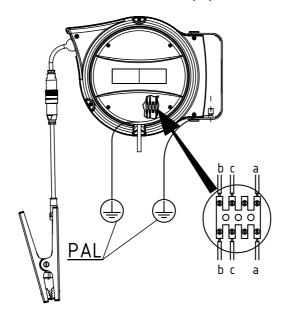

Fig. 9: Connecting the plastic cable rewinder 601KR/KW

Passive grounding

The cable rewinder in connection with the 70SG passive ground clamps is connected to the equipotential bonding via the terminal box of the cable rewinder. The cable rewinder must be permanently connected to the equipotential bonding via the three-wire connecting cable. All three wires must be connected to the equipotential bonding.

All three wires must be permanently connected to the PAL

- oil and gasoline resistant

4. Operation

Electrical systems used in explosion hazard areas must at all times be in a technically faultless condition. Any defects must be repaired or remedied immediately.

Caution!

Observe the connection ratings (supply voltage) of the units.

5. Maintenance

When maintaining or servicing the systems in potentially explosive zones, every possible precaution must be taken to ensure that no explosive atmosphere exists!

Warning!

Maintenance and repair work must be carried out only by qualified personnel trained in working in potentially explosive areas.

Perform regular checks to ensure that the cable and the insulation show no tears or abrasion that could impair the cable's insulation or functioning. Clean the cable with a cloth soaked in warm water to remove dirt or incrustations and ensure perfect unwinding.

Defective devices must be sent in for repair.
