

Résumé Achema 2018: June 11 to 15, 2018

With around 150,000 visitors and several thousand international exhibitors, Achema is the world's largest leading trade fair for chemical engineering and the process industry. Our stand, with its main focus on the dangers that can arise in the production process without controlled earthing, attracted a great deal of attention. Among other things, Eltex presented the new TERRALIGHT - a simple, fast and network-independent monitoring system for grounding containers.

The majority of our visitors came from Germany (46 percent) and other European countries (around 13 percent). The largest proportion of visitors from all over the world came from India (10 percent). We were particularly pleased to welcome so many new visitors to our stand.

Already 2019, the AchemAsia 2019 will take place from May 21 to 23, 2019 in Shanghai. At the booth of our Chinese representative Kar Ming we will show Eltex innovations in earthing and earth monitoring systems.

Résumé FachPack 2018: September 25 to 27, 2018, Nuremberg

The first participation in this European trade fair for packaging, processes and technology met our expectations perfectly. Over 44,000 visitors came to Nuremberg to find out about current trends in the packaging industry.

Our focus was the world novelty **flexION air** discharge bar, which ensures very good discharge over long ranges even in fast machines due to minimal air support. Due to the flexibility of the installation distance, flexION air is ideally suited for the production of products with different dimensions.

More than 60 percent of the trade visitors came from Germany and around 15 percent from other European countries. Throughout the fair, we welcomed visitors from almost all sectors of the packaging industry. The quality of the visitors was extraordinarily high. We are pleased about the large number of new contacts.

Résumé Fakuma 2018: October 16 to 20, 2018

After many years we participated again at the Fakuma in Friedrichshafen. The international trade fair for plastics processing enjoys a very high level of acceptance in the industry and was very well received with 48,000 trade visitors from 126 countries. We were very satisfied with the great interest of the trade visitors in our products and systems and we were able to establish many high-quality contacts.

Our focus was the high-performance discharge bar **SDS** for use in plastics processing. As an example for injection molding, the SDS was exhibited on a conveyor belt. Especially the SDS mounting bracket, developed for this purpose, attracted great interest from the visitors

The new **POWER CHARGER** high-voltage generators for all charging applications, the new **flexION air** discharge bar and the **PR36** ion blower pistol - new with spiral hose - rounded off the Eltex innovations shown at our stand.

Our fair novelties met with lively interest. We were particularly pleased with the numerous new visitors that we were able to welcome at our stand. Here too, the trade visitors came mainly from Germany and other European countries.

The many press reports in the run-up to the trade fairs have contributed to the success of our trade fair appearances. The well-known trade magazines such as "cav", "Kunststoffmagazin", "K-Profi", "Plastverarbeiter", "Coating International", "Verpackungsdruck", etc., reported editorially about Eltex and pointed out our presence at the trade fair.
