

New rope spring train for optimal handling of the Eltex Ion Blower Pistol

Eltex Ion Blower Pistols are used wherever a thorough cleaning of surfaces is only possible by hand. Our **Ion Blower Pistol PR36 and PR55** are already convincing due to their high discharge and cleaning performance. In order to further improve the handling for our customers, we offer you as a **new option a cable spring train with integrated spiral hose** for the air and power supply.

With a working length of 2.5 meters, the rope hoist is optimized for variable and safe use in all production areas. In addition, we offer you an extended protection of the Blower Pistol from mechanical damage. The integrated attachment points on the cable spring pull allow easy installation.

The airbrush with coil spring can be used with various Eltex power supplies. The compact Eltex power supply ES24 with 24V DC and optional 230V power supply is suitable for individual workstations. Several blower pistols can be powered together via a powerful ES51. Our distribution partners are looking forward to inform you about the new option.
