

New Eltex Rotary Nozzles

easyCLEAN type E & varioCLEAN type V

Performance advantages:

Rotary nozzle to conventional blow nozzle:

- Improved cleaning power due to pulsating air jet (comparable to steam jet)
- Cleaning of larger surfaces with lower consumption by moving air jet

Features easyCLEAN nozzle:

- Especially recommended in combination with the duo spiral hose
- Ideal for hand-held applications
- High cleaning effect at a low price
- Low air consumption

New Eltex Rotary Nozzles

Comparison varioCLEAN nozzle to other rotary nozzles:

- Speed-controlled nozzle for constant cleaning even with fluctuations in compressed air.
- Operation from 2.5 bar (approx. 650 rpm) - 6 bar
- Nozzle diameters adjustment without tools, which significantly reduce compressed air consumption. Adjustable nozzle diameter (0/ 0.8/ 1.1/ 1.4/ 1.6 mm)
- Blowing direction continuously adjustable
- Additional air flow along the high voltage tip, resulting in improved ionization and reduced pollution during operation
- Compact design of the rotating disc for minimum space requirement during installation
